

**ProtoObject**

```
classDiagram
    class ProtoObject
    class Object {
        doesNotUnderstand()
        class()
        ...
    }
    ProtoObject <|-- Object
```

The diagram shows a class hierarchy. At the top is a box for 'ProtoObject' with three empty compartments. Below it is a box for 'Object' containing the methods 'doesNotUnderstand()', 'class()', and an ellipsis. A vertical line with an open triangle arrowhead points from the 'Object' box up to the 'ProtoObject' box, indicating inheritance.

**Object**

doesNotUnderstand()  
class()

...
